

Curriculum Vitae

Gary J. SCHWARTZ

Professor of Medicine & Neuroscience
Albert Einstein College of Medicine

Research Interests

1. Neurobiology of gut-brain communication in the control of energy balance
2. Role of adipose tissue sensory and motor innervation in the control of obesity
3. Peripheral and central nutrient sensing in the control of metabolism

Dr. Schwartz is a tenured full Professor of Medicine and Neuroscience at the Albert Einstein College of Medicine, and a senior member of its Diabetes Center, known for its basic research investigations of the physiology, biochemistry and neurobiology of diabetes and obesity. He has been continuously funded by the US National Institutes of Health (NIH) for the last 20 years as an independent investigator, during which time he has published over 130 original peer reviewed articles.

He is an internationally recognized expert on the roles for gut-brain communication in the control of food intake, energy balance, metabolism and glucose homeostasis. He is a Fellow of the American Physiological Society, The Obesity Society, and The American Gastroenterological Association. He serves as the Biomedical Core Director for the Einstein Diabetes Center, and Director of the Animal Energy Balance Phenotyping Center of the New York Nutrition and Obesity Research Center.

He has served as a regular member of multiple NIH and international grant review study sections focused on neurobiology, neuroimmunology, neuroendocrinology, and behavior. Dr. Schwartz is Deputy Editor in Chief of the American Journal of Physiology: Endocrinology & Metabolism Section, and serves on the Editorial Boards of the journals Endocrinology, Diabetes, Nutrition & Metabolism, and Physiology & Behavior.
